

2016-17 SUMMER RANGE v3

3 in 1

Your jacket or trousers are decomposing in several zipped layers, to ensure an efficient versatility according to season. Worn alone, the external garment is perfect for summer thanks to ventilations allowing the air flow. When the insert is zipped inside, you get a mid-season product, windproof, waterproof and breathable. Finally, with the warm lining zipped on, the garment is warm and adapted to winter.

2 in 1

Thanks to a waterproof and breathable insert zipped inside, your summer vented jacket becomes quickly windproof, waterproof and breathable.

WARM & WATERPROOF LINING

The jacket is not waterproof with an integrated insert, but thanks to a removable lining that is warm and waterproof at once. So, once the lining has been taken off, the vents on the jacket are very effective for summertime, and when the lining is on, the jacket becomes windproof, waterproof, and warm for winter and mid-season..

AIR FLOW PROCESS

In order to optimize the vents on chest (they can be zipped vents, or adjustable flaps, or mesh yokes) the Air Flow Process proposes fixed grids on back of the garment for an optimum air flow. It allows that way to ensure an efficient thermoregulation without compromising on safety: indeed this system is totally compatible with CE certification.

NEW Sensitive Touch System

The Sensitive Touch System allows you to use your capacitive touch screen with your glove on! Thanks to an outstanding treatment on a leather piece, allowing to recreate skin conductive properties, you will use easily your touch screen with you index while wearing the gloves.

Works with any capacitive touch screen like iPhone® android® phones, pads, etc...

IXON CE PROTECTIVE TECHNOLOGY

IXON CE Protective Technology products guarantee the highest level of protection and safety of the IXON collection. They are the result of an ambitious challenge met in creativity and innovation. They remain very affordable and offer the best safety for money.

7 essential safety criteria

A CE certified motorcyclist's garment has been designed and developed in order to conciliate optimum protection and comfort of use. After manufacturing, it has been tested and approved by independent experts also referred to notified bodies. A certified garment combines and guarantees 7 essential safety points minimum:

1. IMPACT

The use of CE approved protectors is guaranteed. They increase choc absorption in zones corresponding to the most exposed body parts. Such protectors are compulsory on elbows and shoulders for jackets, on knees and hips for trousers. A Ce certified back protector is not an obligation, neither are knuckle protectors for gloves.

2. ABRASION

The simulation of sliding on asphalt shows that fabrics allowing CE certification are more resistant to abrasion.

3. TEARING

Fibbers nature and density bring a unique structure to the fabric that has stronger resistance to tearing compared to standard fabrics.

4. CUT

The simulation of the piercing of a material by an object in case of fall shows that fabrics limit the risk of cutting by impact as much as possible.

5. STITCHING

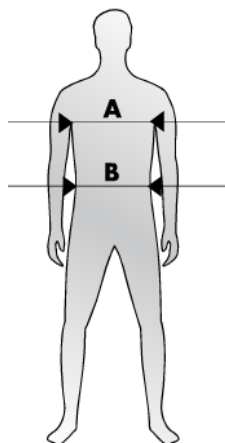

Stitching is tested to traction and improves the global resistance of the garment.

6. ERGONOMICS

Good ergonomic design ensures a good fit of the protectors and the garment when in use and especially in case of an accident.

7. NON-TOXIC

Toxicity tests ensure that no dangerous substance for the human body is contained in the garment materials.

10 GOOD REASONS TO CHOOSE IXON MOTORCYCLE JEANS!

Why should I buy IXON Motorcycle jeans?

These jeans have been designed exclusively for motorcycle riders. IXON has full expertise in motorcycle garments and has integrated its specific technical knowledge in a dedicated jeans range, especially in terms of fit and protection.

Why are they designed for motorcycle riders?

These motorcycle jeans are designed to provide riders better fit and better protection than regular jeans.

Why do IXON jeans protect better than regular jeans?

Mainly for 2 reasons:

- Every model is built with pockets to welcome CE Knee protectors, delivered in a file pocket; the rider has the possibility to adapt the position of CE protectors in 2 different levels according to his size. Some models also propose Hip Protectors.
- They are either in denim with local internal reinforcement in aramid fibers on the most exposed areas, or fully made of Twillguard, an exclusive poly-cotton that guarantees a high level of resistance against abrasion, tearing and cut, meeting the CE requirements.

Why do CE Certified Jeans provide a better protection?

- CE jeans are fully independently tested and approved under 7 criteria: Impact, Abrasion, Tearing, Cut, Stitching Ergonomics, Non- Toxic material.
- CE label is the guarantee that the entire construction of the product has been tested and not only the fabric to abrasion.
- CE Certified garments guarantee a level of protection that will help reduce injuries in case of fall. What is CE certification under the European directive 89/686/CE by notified body Vs 13595 norm? The CE certification under the European directive 89/686/CE by notified body, is a selective application for leisure motorcycle user, as the European norm 13595 regarding PPE is for professional motorcycle user. This directive allows securing by guaranteeing a minimum of protection tested under 7 criteria by an independent and official laboratory named notified body.

What do Category 1 or 2 and level 1 or 2 mean in CE certification?

Category 1 means self certified (by brands)

Category 2 means certified by independent laboratory (Notified body) best fit.

IXON is the N°1 range of motorcycle jeans sold in France...one of the best countries of motorcycle.

Level 1 or 2 inform on the level of requirement tested (the minimum being level1)

Motorcycle garment are exclusively under category 2 and cannot be category 1 self-certified

Why not providing CE certification 13595-1 in level 1 or 2?

CE Certification 13595-1 in levels 1 or 2, proposes indeed higher standards in terms of resistance. However these levels of certification are established and dedicated mainly to professional users. These products have the constraints of being much heavier, stiff, much less comfortable, and last but not least, to be much more expensive.

Why IXON jeans are not all fully CE Certified?

It allows IXON to offer a wide and open choice to consumers, taking into account protection, comfort, style and price.

The first IXON jeans with aramid reinforcement were proposed in 2008. They have been and are still a huge success despite the introduction of CE certification and fully CE garments. Properties of Aramid fabric is no longer to be proven and these jeans are equipped with CE protectors on knees. Aramid jeans offer high quality protection (even if local only) along with a streetwear comfort and look, which is also very important for some riders. "A garment for every rider "will always be IXON's focus.
